DIRECTOR OF NATIONAL INTELLIGENCE
WASHINGTON, DC 20511

The Honorable Peter Hoekstra
Chairman
Permanent Select Committee
on Intelligence
House of Representatives
Washington, D.C. 20515

Dear Chairman Hoekstra:

Thank you for your letter of June 19, 2006, requesting that we declassify "key points" from a National Ground Intelligence Center report on the recovery of chemical munitions in Iraq. Attached please find the requested paper.

Sincerely,

John D. Negroponte

Enclosure: As stated.

The Honorable Peter Hoekstra

UNCLASSIFIED**Subject: Iraqi Chemical Munitions****21 June 2006**

Purpose: This summary provides an unclassified overview of chemical munitions recovered in Iraq since May 2004.

Key Points:

- Since 2003 Coalition forces have recovered approximately 500 weapons munitions which contain degraded mustard or sarin nerve agent.
- Despite many efforts to locate and destroy Iraq's pre-Gulf War chemical munitions, filled and unfilled pre-Gulf War chemical munitions are assessed to still exist.
- Pre-Gulf War Iraqi chemical weapons could be sold on the black market. Use of these weapons by terrorists or insurgent groups would have implications for Coalition forces in Iraq. The possibility of use outside Iraq cannot be ruled out.
- The most likely munitions remaining are sarin and mustard-filled projectiles.
- The purity of the agent inside the munitions depends on many factors, including the manufacturing process, potential additives, and environmental storage conditions. While agents degrade over time, chemical warfare agents remain hazardous and potentially lethal.
- It has been reported in open press that insurgents and Iraqi groups desire to acquire and use chemical weapons.
