Password Change - new developments

Team,

We have new evidence that the Passwords that have been compromised may have accessed data.

MD and CIO has directed that all external Webmail accounts be disabled immediately for all staff who have not changed their password yet (about 4500 staff).

For staff on duty at HQ and CO will be set so that it forces a password change first time and then directs them to Password Plus for a second time password synchronization.

The technical team is working through these details but will require all hands on deck to deal with this crisis. ISGTE team is trying to find ways to devolve some responsibility to one or two persons in each VPU team to handle password changes - more on this in the morning.

Please bear with us during this unprecedented crisis.

Ash.
